## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Sudano et al., U.S. Pat. Application Pub. 2004/0126654.

Rejection of claims 1-11 drawn to a lithium secondary battery negative electrode.

Sudano et al., teach a lithium-secondary-battery negative-electrode component material comprising: an electrically insulating substrate (abstract); a metallic lithium film formed onto said substrate (abstract); and an inorganic solid electrolytic film formed onto said metallic lithium film (0044). A lithium-secondary-battery negative-electrode component material as set forth in claim 1, comprising: a metal base material on said electrically insulating substrate, on its opposite side from where said metallic lithium film is formed (0045). A lithium-secondary-battery negative-electrode component material as set forth in claim 1, wherein said electrically insulating substrate is an organic high-polymer material (0004-0005). A lithium-secondary-battery negative-electrode component material as set forth in claim 2, wherein said metal base material is any from

among copper, iron, stainless steel, nickel and aluminum (0045). A lithium-secondary-battery negative-electrode component material as set forth in claim 3, wherein said organic high-polymer material is either polyethylene or polypropylene (0004-0005). A lithium-secondary-battery negative-electrode component material as set forth in claim 3, wherein said organic high-polymer material is any from among polyimides, polyamides, polyesters, polyethers, polyurethanes, and polycarbonates (0004-0005). A lithium secondary battery configured utilizing a negative-electrode component material as set forth in claim 1 (abstract). A lithium-secondary-battery negative-electrode component material as set forth in claim 2, wherein said electrically insulating layer is an organic high-polymer material (0004-0005). A lithium-secondary-battery negative-electrode component material as set forth in claim 8, wherein said organic high-polymer material is either polyethylene or polypropylene (0004-0005). A lithium-secondary-battery negative-electrode component material as set forth in claim 8, wherein said organic high-polymer material is any from among polyimides, polyamides, polyesters, polyethers, polyurethanes, and polycarbonates (0004-0005). A lithium secondary battery configured utilizing a negative-electrode component material as set forth in claim 2 (abstract).

Thus, the claims are anticipated.
